PIA, the former name AFDA, has over 170 member companies. PIA was founded in 1994 and is part of The Technology Industries of Finland.

In Finland, a viable and competitive domestic defence industry is a fundamental element of credible national defence. Finnish technology expertise and production support Finland's defence and comprehensive security. The Finnish companies work together with the authorities in a Public-Private Partnership model to carry out the responsibilities needed to secure Finland. A major part of army, navy and air force maintenance has been outsourced to domestic companies, which act as close partners to the Defence Forces.

Critical capabilities areas include C4ISR and net-centric capabilities, engagement, mobility, and protection. These technologies and products are necessary to ensure that Finland has the required technology and engineering know-how for life-cycle management, production, research and development, planning, and design. This applies to our capability to integrate, maintain, and repair systems in times of crisis.

With a few exceptions, most Finnish defence, aerospace and security companies are privately owned SMEs. One of their strengths is that many of them also operate in other industrial sectors. We, therefore, benefit from a larger ecosystem with substantial R&D investment (15% of turnover). Turnover within defence, aerospace and security was approximately 2.6 billion Euros in 2023, with a heavy increase of +32% from the previous year. Direct employment was ca. 10 100. The Finnish domestic market is relatively small; therefore, companies look abroad for customers and partners. The export volume varies annually from 40% to 60%, and in 2023, it was ca. 40%. To be competitive we must be highly expert-oriented, agile, and trustworthy.

Assisting member companies in their networking and export activities is among PIA's priorities. PIA is a member of ASD, Aerospace, Security and Defence Industries Association of Europe. PIA represents the Finnish defence industry in NIAG (NATO Industrial Advisory Group), EDA, and Nordic Cooperation.

PIA ORGANIZATION

PIA's strength is in its members and their active participation in PIA's activities. There are eight working groups within PIA. These groups form a platform for the respective companies to come and work together for the common good of PIA members. PIA office coordinates and supports the work of the working groups.

PIA BOARD OF DIRECTORS

Mr Esa Rautalinko, Chair of the Board of Directors
President and CEO, Patria Group

Dr. Matti Anttila, Vice-Chair of the Board of Directors, and Chair
of the Space Group
Business Development Director, Space & Defence, Huld

Ms Merja Annala, Chair of the Land Capabilities Group
CEO, Systematic Finland

Mr Sauli Eloranta, Chair of the RDI Group
Vice President, Defence, VTT Technical Research Centre of
Finland Ltd.

Mr Jussi Järvinen, Chair of the Strategy Group
Executive Vice President, Finland, Patria Group

Mr Jerry Kettunen, Chair of the C4ISR Group
CEO, Savox Communications

Mr Reima Kettunen, Vice-Chair of the C4ISR Group
Sales Director, Bittium Wireless

Mr Timo Lättilä, Vice-Chair of the Space Group
Chief Business Officer, Space, DA-Group

Mr Ville Meskus, Vice-Chair of the Strategy Group
Head of Business Development, Defence, Reorbit

Mr Jarmo Puputti, Vice-Chair of the RDI Group
CEO, XD Solutions

Mr Petri Reiman, Chair of the Aviation Group
Senior Vice President, Insta Advance

Mr Kim Westerlund Chair of the Cyber Group
Head of Cyber Security Solutions, Nixu

In addition to the members of the PIA Board **Mr Ilja Hakanpää**
Director of Sales, Forcit, is Chair of the Naval Capabilities Group

You may reach the members of the board through PIA office
(PIA@techind.fi).

The Finnish defence, aerospace and security industries focus on certain niche areas. Finland is home to global market leaders in armored wheeled vehicles, turreted mortar systems, logistics and certain C2 systems. Finnish companies are also world-leading within C5ISR. Dual-use products with security solutions and civilian applications are becoming increasingly important.

**FROM EXTREME
CONDITIONS**

PIA member companies invest significantly in R&D, ca. 15% of their annual turnover. PIA members are acknowledged internationally for producing high-quality, premium products with long life-cycle performance and being innovative in their methods of utilizing technology. The Finnish climate sets demanding requirements for defence technologies. Everything must function reliably in an arctic environment as well as in summer's heat and autumn rainfalls – and be NATO interoperable. We do excel in snow-how, but most of our products are used in the most demanding environments and crisis management operations around the world.

**NO-NONSENSE
ATTITUDE**

The Finnish value promise is high-quality and reliability. We take pride in keeping our promises. Our actions speak louder than words. We deliver.

**ASSOCIATION OF FINNISH
DEFENCE AND AEROSPACE
INDUSTRIES**

PIA Facts and Figures 2024 introduces PIA member companies and their products, services, and expertise. Our office is at your service for any matters concerning defence, aerospace and security industries in Finland.

PIA FACTS AND FIGURES

The year 2023 marked a substantial growth within PIA's member companies. The cumulative turnover increased by +32%. The strongest growth was seen in the Aerospace sector

The number of PIA members also grew. More and more start-ups, component providers, and companies producing digital solutions are joining PIA and Finland's ecosystem.

10 100 Employees
~20% women

Cumulative turnover
2,6 Bn Euros
growth + 32% from 2022

Over 15% of cumulative turnover to RDI

Exports 40% of cumulative turnover to over 160 countries globally

Capabilities

- C4ISR; digitalization
- Mobility; vessels and vehicles
- Engagement; kinetics and non-kinetics
- Protection; from persons to infra
- MRO, integration, life-cycle services

HOT right now!

- Finnish ammunition production
- Armoured vehicles
- Net-centric capabilities
- Finnish model of Security of Supply and Comprehensive Security

3D Talo Finland Oy

3D Talo Finland Oy is Your partner in virtual reality. We are a 100% Finnish-owned company based in Kuopio. Our primary focus revolves around providing immersive and memorable virtual reality training experiences. Through

our solutions, trainees can safely and effectively practise and enhance skills that would be challenging, costly, or hazardous to train in traditional settings. Rather than passively absorbing information from screens, virtual reality empowers trainees to engage their bodies and hands, immersing them in lifelike scenarios.

Business, Products and Services

We plan the virtual training with You from the beginning. All planning stages are based on researched knowledge of the most effective learning methods in VR without forgetting the end-user experience in both functional and visual aspects.

We create virtual environments for VR glasses using both 3D modelling and 360-degree photography, considering each project's unique requirements.

Accenture Oy

Accenture is a leading global professional services company, providing a broad range of services and solutions in strategy, consulting, digital, technology and operations. We are a talent and innovation-led company with

approximately 743,000 people serving clients in more than 120 countries. Technology is at the core of change today, and we are one of the world's leaders in helping drive that change with strong ecosystem relationships. We combine our strength in technology and leadership in cloud, data and AI with unmatched industry experience, functional expertise and global delivery capability. We help our clients to become the best versions of themselves.

Business, Products and Services

Our defence service offerings support the full value chain from manufacturing to mission, enabling transformed digital defence capabilities. We integrate across people, process, and technology - leading with warfighter experience, driving readiness with joint, synthetic environments and NATO interoperability, all enabled by total enterprise reinvention with platforms, data, AI, cyber and cloud. Accenture provides a full stack of digital services from strategy to sustainment - accelerating mission outcomes while optimizing operations.

Advenica Oy

Advenica offers advanced cybersecurity solutions and services for business-driven information exchange, secure digitalization and high assurance. For more than 20 years Advenica has enabled organizations and

companies to take digital responsibility by providing future-proof, sustainable solutions.

Business, Products and Services

Advenica analyses, designs and implements fundamental protection to prevent intrusion, data leakage and manipulation of critical information. We control every step from design to the after-market to ensure high assurance. With our products and services customers can take full advantage of digitalization without jeopardizing security, integrity and privacy. As our products are future-proof, today's critical information is as well-protected even with tomorrow's technological development. High requirements on security mean we develop and produce vital parts of solutions in-house.

AlliveSim Oy

AlliveSim generates sensor data for OEMs building advanced detection and movement control.

As defence and security systems become more advanced and versatile, the need for data increases exponentially to accelerate product development, go-to market and operational readiness.

Synthetic data generated by AlliveSim boosts time to deliver advanced capabilities at scale.

Business, Products and Services

AlliveSim platform is available with a license model. It comes with a wide portfolio of sensors including visible and IR cameras, LiDAR and radars built to reproduce the key characteristics of the real sensors.

We create and reproduce environments for sea, airborne and land-based systems with wide variety of scenes, realistic dynamic elements, and weather conditions.

We integrate proprietary client assets such as functional software or other assets to build complete system simulation to train, test and validate concepts and products.

Airbus Defence & Space Oy

In today's increasingly complex threat environment, Airbus, as a European actor, brings interoperable and collaborative solutions to ensure superiority for combat systems across the five operational domains: land, air, sea, space and cyber. Airbus combines more than 50 years of field-proven technology with next-generation architecture.

Business, Products and Services

Airbus know-how is underscored by its prime contractor role for Europe's Future Combat Air System (FCAS). The company's world-class portfolio of products includes the A400M, C295 and CN235 airlifters, the A330 Multi-Role Tanker Transport, and robust, unmanned aerial systems (UAS). For networks and systems, Airbus' secure and resilient communications capabilities provide comprehensive bandwidth and best-in-class capabilities, including the development of the Multi-Domain Combat Cloud (MDCC) – a decentralised, cyber-resilient, collaborative information network using cloud-based technologies.

Aisikon Oy

Aisikon Oy is a customer-oriented subcontractor of challenging machined parts and components for harsh conditions. The keys to our success are our skilled and motivated staff, efficient CNC machinery and production methods, and decades of experience.

A significant share of our revenue comes from the military segment.

Business, Products and Services

We are experienced in working with stainless and acid-resistant steel, aluminium, brass, and plastics, as well as challenging materials such as superduplex, titanium, 254 SMO, Inco 904, and alloy C-276. We hold ISO 9001:2015 and ISO 14001:2015 certificates.

Material traceability is a daily concern for us, enabling a high standard of logistical traceability applicable to DoD identification programs and certificates such as EN 10204. Aisikon has devices for three-dimensional measurements and barcode symbology. Examples of our components' end-use include pipes, valves, flow control, power trains, marine, hydraulics, precision mechanics, and measuring equipment.

Aker Arctic Technology Oy

Aker Arctic specialises in designing cutting-edge icegoing and icebreaking vessels, leveraging Finnish maritime expertise to meet the rising need for effective, sustainable ice navigation solutions. These innovations ensure operational safety

and efficiency in harsh, icy waters. Central to the company's endeavour is the expertise in ice model testing, a domain where it has been a pioneer for over 50 years.

Business, Products and Services

In ship design for the navy, the company offers vessel hull ice strengthening to all PC classes and vessel winterisation design down to -50°C.

Aker Arctic owns and operates a modern ice model basin where vessel behaviour in ice conditions can be tested. Besides ship design and model testing, the company's products for icegoing vessels include ice-strengthened propellers, shaftline systems and an Ice Load Monitoring System (ILMS).

A-Laiturit Oy

Founded in 1987, the family company focusing on marine construction works is located in Raisio, Finland. The A-Laiturit's main products are floating heavy-duty pontoons and construction and maintenance services for those.

Business, Products and Services

Nord by A-laiturit is the heavy-duty floating ponton system developed and created in cooperation with several Finnish authorities. The Nord system is a solution for normal or disordered situations. In normal daily base operations, pontoons are stored as port structures. In disordered situations, the same pontoons are used as bridges or platforms.

The modular concrete pontoon system can be modified, extended, and relocated in a very short period. The concrete pontoon blocks can be collected from several different locations and combined, for example, into a bridge in an emergency or disordered situation.

Alamarin-Jet Oy

Alamarin-Jet Oy is world leading manufacturers of waterjet propulsion units and controls systems. Suitable for input power up to 2040HP.

As global suppliers to marine sectors such as

military, police, and offshore supply, Alamarin-Jet is the trusted partner when reliability and service are at the forefront of operational requirement.

Pushing water jet innovation by introducing technical features such as the patented Combi-Frame, a jet frame design which allows for multiple installation methods in AJ 245 & AJ 285 as well as the patented Dual Angle Shaft in the OMEGA SERIES jets which allows 2 different shaft angles without changing jet inclination.

Alamarin-Jet is focused in future technologies and therefore have invested heavily in next generation control systems, including fully autonomous operations, collision avoidance, remote surveillance and monitoring which are all built on the SIGMA vessel propulsion system.

AMEXCI Oy

AMEXCI is a leading Additive Manufacturing company based in the Nordics. Founded in 2017, the company specializes in metal and high-performance polymer industrial 3D printing. We operate two

world-class AM production labs in Sweden and Finland, with a team with deep knowledge in design, manufacturing, analysis, and post-processing, having the capacity to support our customers to industrialize AM. We also offer extensive training and education programs as well as research services. In fall 2024, we are commissioning a state-of-the-art facility in Örebro with 4.700 m², tailor-made for AM, and the latest industrial 3D printing technology available on the market.

Business, Products and Services

AMEXCI, together with its customers, develops a new generation of products where AM acts as an enabler for higher competitiveness and more sustainable production. AMEXCI can support the journey from research, innovation, design, and materials analysis to serial production.

Anarky Labs Oy

Anarky Labs gives super-powers to drone pilots with augmented reality. The company serves the public organizations such as law enforcement, search & rescue teams, first responders, and inspection operators.

Business, Products and Services

AirHUDTM is the first real heads-up display for professional drone pilots to increase situational awareness and allow them to see the drone pinpointed in the sky at all times.

Instead of crowded information in the controller, AirHUDTM provides data where it's relevant. Pilots can choose to have the video feed and map next to the drone in the sky or detached in front of them. As a separate feature, AirHUDTM allows training indoors or outdoors with a simulated drone: The training starts in the classroom with a virtual drone in a virtual environment and continues outdoors with the virtual drone in a natural environment. AirHUDTM streamlines processes and brings new possibilities.

Arctest Oy

Arctest is a leading Nordic manufacturer of environmental test equipment with its own sales office in Finland and Sweden. The export is global, and in Europe, we work primarily through local partners.

Business, Products and Services

Environmental Test Chambers – Environmental equipment tailored to customer needs.

Arctest product portfolio consists of Climate Test – chambers, rooms, mobile containers & trailers.

Having climate test equipment made mobile is the optimal solution when there is no space indoors or other reasons require tests to be done in places where there is no real estate to place the test equipment. This product line is especially popular amongst our Military customers and the Defense equipment industry. Our solutions are designed to be able to stand outdoors in all weather conditions for a long time without affecting the test result.

Aspocomp Group Oyj

Aspocomp is a PCB manufacturer and supplier with own factory in Oulu, Finland and a partner network in Europe and China. In Oulu factory we produce mostly demanding, high-tech boards with short delivery times. Our main customer segments are security, defence & aerospace, telecom, automotive, industrial automation and semiconductor industry.

Business, Products and Services

New PCB design starts with a project linked to technologies, capabilities and services. One of Aspocomp's most important contributions is our professional support for the PCB projects starting from the initial stages.

Aspocomp can assist the project in specifying the optimized materials, best stack-up and recommend the relevant design rules based on the latest information in the PCB industry. We support PCB projects all the way from the early design phase, through the R&D sampling and finally in volume manufacturing.

Aspocomp holds AS9100D certificate.

Atea Finland Oy

We build Finland with IT. In Finland Atea has more than 450 professionals in 12 cities providing IT solutions and services for our customers.

As Northern Europe's market leader in IT infrastructure, Atea provides solutions that fuse technology, creativity and values for building a sustainable future.

Business, Products and Services

We guide our customers on their digital journey – a journey with three dimensions: information management, digital workplace and hybrid platforms.

Information management brings together data from different sources. Finding and utilizing the interdependencies of data bring significant support to decision-making.

Digital workplace is about collaboration and accessibility of information. A smarter and more productive way of working results in a better employee experience.

Not all data can be exported to the cloud. Atea's hybrid platform solutions help you to store, manage and share your data safely and efficiently.

ATLAS ELEKTRONIK Finland Oy

ATLAS ELEKTRONIK Finland Oy is a capable and agile naval system house with proven service and product portfolio. The company is a 100% owned subsidiary of ATLAS ELEKTRONIK, a maritime high-technology

Group with a global footprint. We are driven by technology and do have a very keen ear for customer requirements and wishes. Our main domestic customers are the Finnish Defence Forces and Border Guard.

Business, Products and Services

In addition to the ATLAS ELEKTRONIK Group product portfolio, we provide:

- Compact Combat Management and Mission Management System for navies, coast guards and other maritime customers
- Systems engineering and integration services
- Applications and software development for critical systems such as C4I-systems, Minelaying systems, Electronic Warfare and Datalink systems
- In Service Support and MSS services
- Main contractor and project support services for small and midsize projects.

Aufwin Defence Systems Oy

Aufwin Defence Systems designs and manufactures Aufwin Perimeter Security (APS) and Aufwin Perimeter Defence (APD) systems that are autonomous area Security, Surveillance, Reconnaissance and Force

Protection platforms. The platforms are based on various sensors, autonomous drones, AI, and other supporting software that autonomously alarm, identify, respond to, and act on the identified objects that have breached the secured perimeter.

The platforms are highly flexible and can be installed in individual units or entire platforms. The systems identify all objects in air, sea, EMS and ground, i.e. moving or static, living or man-made, appearing on the secured perimeters.

Aufwin Perimeter Security and Perimeter Defence are designed for military purposes but can also be used in civil applications. Aufwin Defence Systems operates in Tactical and Combat Technical domains on an open architecture with other C2/3/4/5/6-ISRT -systems.

BerryGlade Oy

Leading batch and mass producer of small and medium-sized components with a firearm parts manufacturing permit. Our newly built factory holds modern production equipment with a complete critical equipment

redundancy. We maintain top-tier efficiency and competitive edge with a strategic focus on automation and smart manufacturing technologies, benefiting both our operations and our clients' success.

Business, Products and Services

Manufacturing and assembly of parts and components within the \varnothing 0,5–65 mm range, covering all product lifecycle stages from prototypes through to mass production.

Wide portfolio of 29 Swiss-type CNC lathes with bar feeders, suitable from micro machined parts to complex geometries requiring 5-axis and multi-axis machining.

Laser welding with two CNC-controlled Nd:YAG and fiber lasers with micro welding capability. Laser markings with colour capability.

Multiple CMM & VMM measuring machines and ISO9001-2015 certified QMS.

CGI Finland Oy

Founded in 1976, CGI is among the largest IT and business consulting services firms in the world. We are insights-driven and outcomes-based to help accelerate returns on your investments. Across

hundreds of locations worldwide, we provide comprehensive, scalable and sustainable IT and business consulting services that are informed globally and delivered locally.

Business, Products and Services

CGI helps defense and intelligence clients deliver secure, complex, large-scale programs from the back office to frontline operations. CGI delivers mission-critical space software systems across Europe, Asia and North America, supporting programs from satellite navigation, communications and operations, to space-enabled applications.

Cybersecurity is part of everything we do: security controls are baked-in, not bolted on. Our global experience helps us predict and defend against new attacks, and our front-line capabilities reflect this knowledge. While cyber threats are global, we know that requirements and challenges vary locally.

Conlog Oy

Conlog is the enabler of networked military operations. We provide highly mobile, containerised shelters that can be operated in the most demanding conditions. Conlog is one of Finland's principal defence systems integrators, providing NATO and its allies with modern, integrated security solutions and comprehensive life cycle management and sustainment services.

Our systems protect against ballistic threats and enable military units to perform at sea, in the desert or the Arctic. The shelters can be provided with Conlog's mast systems, which can lift radars or antennas hydraulically to 25 m or more in minutes. Our shelters can be outfitted as mobile field hospitals for civilian or disaster operations or equipped with other specialist equipment.

Finceptum Oy

For 15 years, Finceptum has been helping its customers secure their operative solutions using open-source technologies.

Business, Products and Services

Finceptum assists application developers and end-user organizations in building secure operating platforms for their most critical solutions, from tablets to virtualized servers. The

platform includes the operating system that has been hardened for the specific use case and the selection of hardware with the required security profile. The platform is designed to protect against known and future vulnerabilities. This allows the operative solution to be used confidently, even in the most critical environments. The solution also includes an installation service to guarantee that only desired components are installed and an inventory is created.

Finceptum also assists customers in modernizing the old operating environments of existing solutions, as we have the capabilities and skills to analyze the operation of systems.

Geneset Powerplants Oy

Geneset Powerplants Ltd is an experienced Finnish energy and power industry-applied equipment and systems supplier. Geneset is specialized in power generation, energy efficiency and power-saving fields. Product

groups vary from diesel and gas generators 30 - 3000 kVA to modern CHP- gasification technology equipment using renewable fuel materials such as waste or clean biomass. During the last 30 years, products have been exported to over 30 countries.

Business, Products and Services

Geneset Powerplants Oy manufactures EPM and HPM (MIL-STD-285/IEE-299) protected prime power systems installed in a weatherproof canopy or container, including control systems and an automatic transfer switch. The devices can be towed with equipment according to the road traffic law or equipped with hook lift equipment. Gasification technology plants can be delivered in a few containers, making transport easy. On the site, it needs just plug and play, and you can have electrical power and thermal or cooling energy.

ICEYE Oy

ICEYE offers actionable intelligence through Earth Observation, with unmatched monitoring capabilities to swiftly detect and respond to changes worldwide. With the largest SAR satellite constellation, ICEYE provides objective, near real-time insights, ensuring customers have access to actionable data day or night, even in challenging environmental conditions. Serving as a trusted partner to governments and commercial sectors, ICEYE delivers intelligence across various sectors including insurance, natural disaster response, security, maritime monitoring, and finance. Headquartered in Finland and operating globally, ICEYE is driven by a shared vision of improving life on Earth by becoming the global source of truth in Earth Observation.

Business, Products, and Services

Small yet incredibly powerful, ICEYE SAR satellites orbit Earth daily and even multiple times per day, providing governments and organizations with timely, accurate, and actionable insights for faster and better decision-making. ICEYE's products and services can be grouped into 3 different offerings:

1. Data: Empowering customers to monitor, detect, and respond to Earth's changes like never before. ICEYE facilitates observation of any location every few hours, day or night, in any weather.
2. Satellite missions: ICEYE provides SAR satellite systems to governments and organizations with expedited deployment. Smaller, cost-effective, and flexible, they outperform traditional systems.
3. Natural Catastrophe Insights: Leveraging near real-time intelligence, ICEYE aids in anticipating and responding to global natural catastrophes. ICEYE's detailed insights into floods and wildfires assist the public sector and insurers when it matters most.

Image Soft Oy

Image Soft delivers advanced underwater surveillance systems designed for coastal area defence, harbour security and key infrastructure protection. We also provide simulators for civilian and military maritime training.

Business, Products and Services

Image Soft's new UNWAS system is based on sensitive hydrophones and magnetic detectors capable of detecting the quietest divers or mini-submarines. With over 30-year experience in the field of subsea surveillance, our UNWAS systems have successfully detected, tracked, and classified numerous incursions by foreign submarines. The UNWAS system, along with its training simulator, uses the latest signal processing and software algorithms, with deep learning software assisting the surveillance operator in detecting the earliest signs of approaching intruders, who may also try to infiltrate the area underneath a friendly cargoship. The UNWAS system offers the most cost-efficient solution for persistent 24/7/365 surveillance.

Isaware Oy

We are an engineering house that develops state-of-the-art solutions for ground applications, aviation, and space. We exploit novel data fusion and machine learning technologies for actionable insights from complex data.

We also develop space technology for New Space and operational space platforms that monitor the Sun and the Earth's environment and provide global next-generation services.

Business, Products and Services

IT solutions for situational awareness. We use data fusion and machine learning to analyse multi-dimensional Earth and Space-based data for reliable situation pictures.

Space technology. Our focus is new X-ray instruments for Space Weather and astrophysics. The first one is the X-ray Flux Monitor for CubeSats for the ESA Sunstorm mission, which has operated since August 2021. Next to come: XFM instrument for operational deep space missions as well as XFM for LEO constellations.

Project management: Experience in ESA, NASA and EU programmes

Jet-Tekno Oy

Jet-Tekno Oy is specialized in the design and manufacture of refuelling and other ground service vehicles and equipment.

Business, Products and Services

Jet-Tekno Oy has a very experienced management and production team aiming to build long-term customer relationships. Many of the clients it serves today have been with the company since its beginning.

All design and assembly operations are undertaken under the same roof, with certain components being sourced from carefully selected sub-contractors and suppliers. Jet-Tekno can maintain close control of its product quality at all stages, ensuring that the equipment it supplies is safe, dependable, and efficient. All products are designed to match the customer's requirements and meet the relevant civil or military aviation regulations.

Jet-Tekno has supplied equipment, for example, to civil & military aviation of Finland, Sweden, Norway, Estonia and Western & Central Europe. Oil companies, including Shell and Neste are also its customers.

Business, Products and Services

In the past 30 years, Mikro-Pulssi has delivered several hundred automatic fire protection systems for armoured military vehicles. Our systems have been installed in wheeled vehicles (Patria AMV, XA-180 series, XA-202, XA-203), tracked vehicles (Leopard 2-based special vehicles, K9 howitzers, M109 howitzers), command and control containers, and mounted on anti-air missile platforms.

Our latest product development, ExAct Titan, is an innovative fire protection system for armoured military vehicles. The system protects the crew and the vehicle against all kinds of fires. Explosive fires and armour penetrations are detected and suppressed in milliseconds, providing excellent protection against modern fire threats such as IEDs.

Milcon Oy

Milcon Oy specializes in importing and marketing MIL applications like C4I/STAR products and systems for harsh environments.

We design and manufacture harnessing and electrical solutions for demanding military applications – from prototype to mass production. Supplied products vary from a single component to whole systems.

We have great manufacturing partners and know their competencies and capabilities well so that we can choose the best for certain projects – decisions are based on partner competencies, workload level, etc.

Business, Products and Services

- Ruggedized fibre optic products for tactical field applications
- Rugged headsets and field telephones
- Military antennas and power units
- Designing and manufacturing military-harnessing systems
- Special spare parts and components for military electronics
- MIL-connector series, planning, consulting and procurements

Milectria Group Oy

Milectria Oy is a growing manufacturer of electrical systems focusing on expertise and high-quality work.

We develop, design and manufacture products for various demanding operating conditions in the

defence, military and industrial markets.

We add value to our customers by meeting their testing, manufacturing, traceability and change management requirements.

Milectria is an international company with operations in Finland, Estonia and United Arab Emirates (UAE).

Business, Products and Services

- Electromechanical assemblies
- Cable and wire harnesses
- Integration and installation services
- Prototype manufacturing: From prototyping to serial production
- Technology transfer and material kits: Extensive experience in technology transfer projects, where the capability to manufacture electrical systems has been trained and supported locally.
- Military Quick Stock - quickstock.milectria.com: Online store where you can buy electrical material with fast delivery time without MOQ

Mjack Oy Ltd

Mjack Ltd Oy produces loading and unloading systems for sensitive payloads.

Mjack Solution Advantages: Eliminates the need for any separate cranes, forklifts etc; Solves problems with sensitive and fragile

loads; Loading and unloading in tight places, only 20 cm extra height is needed; Suitable for every container-based solution; Available customisation to all needs and purposes; Built-in technology to load and unload without any tilt angle, jolt or vibration; Suitable for uneven ground surface and any terrain or environment; Reduce the risk to a minimum of damaging sensitive and fragile payload.

Tactical Advantages: Fast and secure, independent loading and unloading (one button remote operation), Minimise the time needed in the loading and unloading phase and Self-sufficient operation (no need for external power source); Easy to operate, no special training required; Compatible with all transport units. Modirum Security Technologies Oy

Modirum Security Technologies stands at the forefront of Command and Control Solutions, driving operational excellence on a global scale. Renowned for their expertise in C2, C4ISR, and JADC2 solutions,

Modirum's technologies offer real-time insights to facilitate better situational awareness, crucial for critical missions within military and emergency response scenarios. By accelerating the OODA loop, Modirum enhances rapid decision-making and response capabilities. Their solutions are built on interoperability and standardized practices, ensuring seamless integration across diverse systems and platforms. Leveraging AI for actionable intelligence and equipped with advanced real-time video streaming technology, Modirum ensures the delivery of high-quality feeds from a variety of sources under any network condition. Committed to enhancing mission-critical operations, Modirum has established itself as a reliable partner for both governmental and private sectors, promising unparalleled operational efficiency.

MORPHO_Q

Morphona Oy Ltd

Oy Morphona Ltd. is a privately owned company founded 2014. Company develops innovative products for coatings, additives, and foamed structures based on carbon nanotubes cellulose composite by researchers working in connection with the University of Jyväskylä.

Business, Products and Services

The products are used for radio wave attenuation and protection applications, and they are also suitable for various heating solutions. Products provide electromagnetic shielding and fading properties that are not available on the market. Different materials are suitable as a coating substrate, such as paper, fabric, wood, metal, glass, and various polymers. The products are enabling a unique fading feature, which makes the protected objects invisible to radar and nearfield infrared (NIR) observation. The properties can be adjusted by the properties of the mixture, the quantity and the quality and thickness of the base product.

Owner	Privately owned

Nokia Solutions and Network Oy

At Nokia, we create technology that helps the world act together.

As a B2B technology innovation leader, we are pioneering networks that sense, think and act by leveraging our work across

mobile, fixed and cloud networks.

Service providers, enterprises, governments, and partners worldwide trust Nokia to deliver secure, reliable and sustainable networks.

Business, Products and Services

To support defence digital transformation, Nokia plays a key role in enhancing military critical communications capabilities in the following three primary segments:

- **Military Wide area and data centre networking:** to securely interconnect military facilities within a country and secure subsea cables.
- **Military wireless networks:** where 5G networks will provide reliable high-speed connectivity for bases, headquarters, forward operating bases, and naval task forces.
- **Tactical edge 4/5G systems:** complementing existing combat radio to support data-intensive applications on the battlefield.

Noptel Oy

Founded in 1982, Noptel specializes in designing and manufacturing optoelectronic products for distance measurement. Since 2011, Noptel Oy has been a subsidiary of FN Herstal.

Business, Products and Services

Noptel long-range laser rangefinder modules allow distance measurement from several kilometres beyond 30 km. These robust, small-sized, eye-safe rangefinder modules are applied as OEM parts by system integrators in military and civilian systems and devices. Typical applications for these modules are systems and handheld devices dedicated to thermal imaging, observation, surveillance and reconnaissance, as well as weapon sights and gimbals for drones and UAVs.

Brand new Noptel LineLIDAR sensors are dedicated to various profiling applications, providing a combination of excellent precision and a high measurement rate of up to 400 Hz, as well as a wide field of view comprising 256 channels, enabling dense angular resolution.

Nordic Drones Oy

Nordic Drones manufactures and develops UAV systems for military and security needs. Especially in the military and security sectors, situations, circumstances and needs change constantly. We always design

and produce the equipment according to the customer's wishes. All our products have been thoroughly tested, and they work accurately and efficiently even in demanding Nordic conditions. We design, test and manufacture drones entirely in Finland.

Business, Products and Services

Nordic Drones SkyDrone7 UAV system is designed for authorities and high-level security use. SkyDrone7 can fly for more than one hour with one battery. This means a flight distance of up to 20 km and back. The UAV system is winter tested in Finnish Lapland and is easy to use in cold conditions. It has easily interchangeable payloads with excellent performance. In addition, Nordic Drones designs and makes custom-made gimbals for specific needs.

OAC Finland Oy

OAC Finland Oy aims to ensure those engaged in special missions and challenging pursuits can safely push their limits relying on our cutting-edge fiber composite solutions.

Our composite technology

department, OAC Tech, offers the entire product development life cycle process from design, prototyping and testing to series production of finalized product. Typical products are critical components to tactical gear e.g., rifle stocks, but we also manufacture our backcountry skis and ski bindings. We are located in Kangasala, next to Tampere.

Business, Products and Services

OAC Finland Oy's manufacturing department, OAC Tech, has a solid expertise in all composite material technologies. We offer the entire product development process from design, 3D modeling and prototype manufacturing, up to testing, road mapping and further development to series production. Our speciality is RTM technology (Resin Transfer Moulding) but master all major composite manufacturing methods.

Rautalammin Pinta Oy

Rautalammin Pinta Oy designs and manufactures fully equipped containers and shelters for military and civil purposes and provides surface treatment for special vehicles and containers, including logistics services.

Business, Products and Services

We deliver ready-to-use containers for demanding needs. In addition to the containers' surface treatment, we can equip them as you wish and integrate machines and equipment.

We handle and paint the equipment in accordance with NATO's and Finnish Defense Forces' camouflage painting instructions. The most common products to be painted are containers, heavy vehicles, equipment, and special vehicles. We also implement challenging surface treatment projects for various industrial sectors.

ReOrbit Oy

ReOrbit is a leading provider of software-defined satellites. We transform technology and enable space applications in our current and future society. Our target position of streamlining data flow in space feeds into our ambition as a company: to expand universal coverage, close the digital divide worldwide and benefit the environment.

Business, Products and Services

Our satellites are designed with an in-house developed software platform Muon. This allows us to produce application and subsystem-agnostic satellite platforms, such as the Gluon product line, in a cost-efficient and flexible way. We also offer complete solutions built on the software-defined architecture with a flexible payload optimised for the GEO environment - the Small SatCom, to meet the increasing demand for secure communications services. We are building optical data relay constellations in MEO and Earth observation missions in LEO for our current customers.

SA-TA-HY Oy

Kimmelux is the leading manufacturer of security and bulletproof glass in Finland. With over 17 years of experience, we have developed a wide range of products for safety-enhancing building glazing, architectural solu-

tions, marine vessels, military markets, as well as naval, land, and service component production.

Business, Products and Services

Our unique method of manufacturing bullet-resistant glazing incorporates special materials and procedures that reduce the weight and thickness of the glass while maintaining superior ballistic performance. Our safety glass withstands aggressive attacks without serious damage, outperforming traditional safety glazing. Our unique technology allows for thinner and lighter glazing that fits various window frames that enhances bullet resistance in vehicles without adding excess weight. Additionally, safety glazing provides effective UV protection, safeguarding valuables while maintaining brightness and color display.

Scandinavian Seaplanes Oy Ab & Atol Aviation

Scandinavian Seaplanes aims to be a leading seaplane manufacturer in the world. Located at Halli airport area, Central Finland, our production facilities are ramping up to produce the second prototype and

production version of the ATOL Aurora amphibian. The Aurora is a two-seat light sport aircraft intended for private flying from lakes, seas, land and snow. It will be certified according to European LSA certification specifications.

In addition to the Aurora project, Scandinavian Seaplanes will start developing a hybrid/electric seaplane, which is a 5-12 seat amphibian intended for private and commercial operations from land and water. Moreover, Scandinavian seaplanes already have partial EASA Production Organisation Approval and are working towards full approval. That will enable ScS to manufacture approved aircraft and parts as a contractor. We also have a full design capability for aircraft and aircraft parts.

Silent Steel Oy

Silent Steel is a Finnish manufacturer of weapon parts and accessories. The products are designed to suit the requirements of different customer segments: sportsmen, hunters, law enforcement officers and the military.

The founder and personnel of the company have broad experience in firearms design and production. The continuous end-users feedback allows us to understand better operators' needs and the directions of product improvement and development. Certain features of our products have been suggested and engineered with the assistance of SWAT team personnel.

Business, Products and Services

Our main product is Silent Steel Streamer flowthrough sound suppressor and different accessories in the Streamer product family. The new flowthrough technology was patented in 2022. The Streamer suppressors are modular and versatile for many purposes. They can be equipped with Flow Suppression Unit (FSU) when used in gas-operated self-loading rifles and machine guns. The unit can be changed to Baffle Suppression Unit (BSU) when maximum sound suppression is desired. The baffle suppressor is ideal for bolt action rifles when the extra blowback is not causing any issues. The calibre can also be changed when changing the suppression unit. The modular Streamer suppressors can also be equipped with Simulation Unit (SU) and Blank Adapter Unit (BAU).

Systematic Oy Finland

Systematic delivers operationally proven C4I software that provides commanders at all battlespace levels with comprehensive situational awareness and advanced mission management tools.

Business, Products and Services

Our core solutions – SitaWare Headquarters, SitaWare Frontline, and SitaWare Edge – function across all echelons of command, from the individual dismount through to the Joint level.

Operating across all domains, the SitaWare suite is trusted by more than 50 countries globally and has been deployed to support missions including combat, peacekeeping, disaster relief, and more.

Systematic's AI-powered decision support tool, SitaWare Insight, empowers users to gain the most out of their intelligence cycle, while our in-app digital training platform, SitaWare Aspire, enables easy training.

Systematic's IRIS software is the de facto NATO standard for military messaging and provides tools to create, display, and exchange information.

T & G Nordic Oy

We design and manufacture electrical cable and harnessing systems for harsh environments based on copper and fiber. We also design and assemble industrial automation cabins and systems. We sell electrical

and optical connectors, electromechanical components, tools, wires, cables, and cable accessories.

Business, Products and Services

At the end of 2017, T&G Sarkkinen Oy and Gett Nordic Oy merged and formed T&G Nordic Oy. Tens of years of experience of both companies are now connected under one common roof.

T&G Nordic Oy offers unique opportunities from design to production, from components to complete systems and from services to training, from deep of the sea to high up the space and all in between. Our customers represent the top of the Finnish technology industries, and we serve them through three strong business units: Defence & Security, Automation, and Components, supported by our professional production team.

In August 2023, the production facility TGN Estonia opened in Rakvere, Estonia.

Telenor Maritime Oy (KNL)

KNL is a technology company with beyond-line-of-sight communication solutions. Our software-defined radios adapt to the needs and requirements of modern military and security operations, providing fast

and reliable data links in any operating environment. We operate globally, and our purpose is to get our customers connected. We are part of Telenor Group, a leading telecommunications company across the Nordics and Asia. KNL's HQ is in Oulu, Finland.

Business, Products and Services

The Cognitive Networked HF (CNHF) is a modern autonomous and automatic HF system. CNHF radios sense their operating environment without the user's intervention. They intelligently detect free spectrums and optimise every parameter – in real-time.

Our products:

- CNHF1 fully-digital transceiver
- CNHF Manpack portable version, all while being secure and easy to operate
- CNHF-ID enhances existing HF and VHF radios performance and makes radios from different vendors interoperable with each other

Toptester Oy

Toptester Ltd provides MIL-STD-810H-standard environmental and mechanical tests. We are a privately owned official test house. Our operations are guided by the ISO 9001 and Nato AQAP-2110 certificates. We are also a Finas 17025 accredited test house. We have an over 20-year track record of different kinds of testing and reliability cases.

Business, Products and Services

The military or MIL-STD-810 tests are built to test products designed for use in extreme conditions. The test aims to determine the environmental impact and the life cycle of the equipment or products. It also tests the performance of materials when exposed to environmental influences during their service life.

MIL tests include several different tests and, thus, environmental conditions. We expose your product, for example, to dust, rain, sand, vibration, as well as extreme temperatures and shocks. We also do special MIL tests like Icing Rain and Blowing Rain.
